- 11) A pool is being filled with a large water hose. The height of the water in a pool is determined by $8g^2 + 3g - 4$. Previously, the pool had been filled with a different hose. Then, the height was determined by $6g^2 + 2g - 1$. Write an expression that determines the height of the water in the pool if both hoses are on at the same time. Simplify the expression.
- 12) The length of a rectangle is represented by 4a + 3b, and its width is represented by 3a 2b. Write a polynomial for the perimeter of the rectangle.
